Experience

User Experience Consultant at Siciliamia

Sept - Dec, 2024

- Designed and iterated wireframes for a desktop e-commerce site, refining solutions through multiple rounds of user feedback and usability testing.
- Developed sitemaps and structured information architecture, ensuring alignment with company branding and UX strategy.
- Conducted competitive analysis and market research to identify usability gaps and define effective user flows.
- Created user flows, journey maps, and wireframes to optimise key experiences including villa listing, property search, and event booking.
- Collaborated cross-functionally with developers, marketers, and stakeholders to ensure smooth design-to-development handoff

Certifications

Google UX Design Certificate – Issued by Coursera

(April - September 2022) | [View Certificate](#)

UX Design Internship Certificate – Siciliamia

(September - December 2024) | [View Certificate](#)

Projects

Cardminder App

April 2026 | [Case study](#)

- Identified 4 core pain points in existing credit card management tools through competitive analysis of banking apps, Apple Wallet, Mint, and Prism
- Designed an end-to-end mobile app allowing users to store card details, track billing cycles, and receive advance payment reminders — eliminating missed due dates

Microsoft suite

Education

University Of Calicut

Bachelor of Architecture

2013 - 2018 | India

- Introduced tap-to-copy card fields using JetBrains Mono typography, reducing friction at online checkouts
- Built a complete design system comprising colour palette, typography scale, component library, and WCAG AA accessible colour contrasts

Pizzamia

September 2023 | Pizza delivery app | [Case study](#)

- Researched usability gaps across 5 competitor apps including Domino's, Pizza Hut, and Zomato, identifying confusing customisation flows, hidden pricing, and poor personalisation as core problems
- Designed an end-to-end pizza ordering experience with live price updates during customisation, visual ingredient feedback, and auto-applied offers.
- Tested mid-fidelity wireframes across 7 key user flows including menu exploration, order customisation, checkout, and order tracking
- Built a full design system with accessible colour palette, Outfit typography scale, and reusable component library.

Expenso

March 2023 | Expense tracking app | [Case study](#)

- Analysed 4 competitor expense apps including Expensify and Zoho, identifying tedious manual entry, cluttered dashboards, and privacy concerns as primary drop-off causes
- Designed a personal finance app focused on fast expense logging, flexible category tagging, visual spending insights, and smart bill reminders
- Prioritised privacy-first design — no mandatory bank linking, giving users full control over their financial data
- Built a complete design system with dark-themed UI, Poppins typography, and colour-coded category components for quick scanning.
